# SEPSIS CARE

Sepsis is a complication that occurs when your body has an extreme response to an infection. It causes damage to organs in the body and can be life-threatening if not treated. Sepsis can sometimes turn into septic shock, which has a higher risk of death. Identifying sepsis early and starting appropriate care quickly increase the chances of survival. This data is provided by the Centers for Medicare and Medicaid Services.

- Sepsis Bundle Compliance - % of patients who received timely and appropriate sepsis care according to national recommendations for severe sepsis and/or septic shock

% of patients that received appropriate care for severe sepsis or septic shock

Sepsis Care

Hospital	%
Scottsdale Osborn Medical Center	62.0%
Scottsdale Thompson Peak Medical Center	62.0%
Deer Valley Medical Center	59.0%
John C. Lincoln Medical Center	59.0%
Sonoran Medical Center	59.0%
Scottsdale Shea Medical Center	57.0%

Network Average: 57.0%
