

CLINICAL CARDIAC ELECTROPHYSIOLOGY FELLOWSHIP

Fellows

Class of 2028

Naveen Vuppuluri, DO

Fellowship: Cardiovascular Disease – Henry Ford Warren

Residency: Internal Medicine – Kettering Health

Medical School: Midwestern University Arizona College of Osteopathic Medicine

I was drawn to cardiac electrophysiology because of the unique blend of problem-solving, precision, and the ability to make an immediate impact on patients' lives. Throughout my cardiology training, I found myself consistently excited to be in the EP lab, especially seeing how treating arrhythmias can quickly improve patients' day-to-day quality of life. I enjoy the challenge of understanding complex rhythms, the hands-on nature of the field, and how rapidly it continues to evolve with new technology.

I chose HonorHealth for its strong procedural exposure and focus on developing well-rounded electrophysiologists. I was especially drawn to the emphasis on innovation and advancing procedural techniques. My clinical interests include atrial fibrillation, advanced mapping systems, and emerging technologies such as pulsed field ablation that continue to advance the field.

Outside of medicine, I enjoy staying active, trying new restaurants, and spending time with my wife and our Maltipoo puppy. I am also passionate about patient education and finding ways to help patients better understand and take ownership of their heart health.

Class of 2027**Rishi Charate, MD**

Fellowship: Cardiovascular Disease - University of Tennessee Chattanooga

Residency: Internal Medicine - University of Louisville

Medical School: University of Missouri - Kansas City

I first became interested in EP during internal medicine residency at University of Louisville. My interest in arrhythmias and the procedural aspect of EP led me to pursue an EP research fellowship at the Kansas City Heart Rhythm Institute. This year allowed me to play a crucial role in multiple research publications, however, more importantly, learn the value of high-quality research and the dedication needed to contribute to this space in the field of EP. I then went on to pursue a cardiology fellowship at the University of Tennessee-Chattanooga and had an amazing experience serving a high volume, high catchment area with an extremely rewarding patient population.

My interest in EP lies in the merging of quality bedside manner, broad horizons for clinical research, and a rapidly expanding variety of procedures. My outlook lies in offering high quality patient care, continued teaching for residents and fellows, and contributing to clinical research. I believe HonorHealth shows excellence in all these avenues, and I am extremely excited to join such a cohesive group.

In my free time I enjoy spending time with my dogs, exploring new restaurants, and cooking new recipes.
