

INTERVENTIONAL CARDIOLOGY FELLOWSHIP PROGRAM

Fellow

Class of 2027

Christopher Low, MD

Fellowship: Cardiovascular Disease - HonorHealth
Residency: Internal Medicine – Kaiser Permanente
Medical School: California Northstate University

I was born in Sacramento, California, and was raised in Stockton, a city in California's Central Valley. I completed my undergraduate education at UCLA and earned my medical degree from California Northstate University. I then completed my Internal Medicine residency training at Kaiser Permanente-Santa Clara Medical Center, followed by a Cardiovascular Disease Fellowship at HonorHealth. My scholarly work includes research examining the relationship between diabetes and coronary artery disease, as well as the application of cardiac imaging to evaluate the coronary artery disease in patients prior to liver transplant. I am passionate about providing high value, evidence-based care for my patients and building strong patient-physician relationships.

I was drawn to HonorHealth because of its strong commitment to the Phoenix and Scottsdale communities, supportive and approachable program leadership, and clear emphasis on fellow education. The program's robust clinical volume, diverse patient population, and collaborative learning environment provide an ideal setting for comprehensive cardiology training. I look forward to continuing my training at HonorHealth as an interventional cardiology fellow.

Outside of medicine, I am an avid basketball fan of all levels and am a huge Sacramento Kings fan. I love outdoor activities like hiking and snowboarding.
