

At HonorHealth, you'll find the heart care services you need—from diagnostic testing and surgery to compassionate care as you recover.

Caring for your heart requires a blend of innovative techniques and time-tested experience. Here's a look at some of the latest diagnostic tools and treatments at HonorHealth medical centers and cardiology offices:

### Get the Care Your Heart Deserves

If you're facing heart or vascular issues, you don't have to go it alone. At HonorHealth, you'll get a detailed explanation of your diagnosis and treatment, and plenty of help as you get better. You'll receive the personal care you need to get back to what's most important: your life.

### Advanced Technology

HonorHealth offers the latest technology to help a specialist detect a heart or vascular condition, or evaluate changes in your condition.

#### ■ **Transcatheter aortic valve replacement :**

If you have severe narrowing of your aortic valve and are at high risk for conventional surgical aortic valve replacement, this less invasive procedure may be for you. It's available at HonorHealth Scottsdale Shea and Deer Valley medical centers.

- **Cooldown:** If you have cardiac arrest, specialists can cool your heart, brain and the core of your body to 93-95 degrees Fahrenheit. This helps keep the heart and brain stable to improve your recovery.

### Cardiac Rehabilitation

When you're recovering from a heart issue, you want a cardiac rehabilitation center staffed with talented cardiologists, registered nurses, certified exercise physiologists, a social worker and registered dietitians. You'll find all of this at HonorHealth facilities.

Cardiac rehab has been shown to improve both your exercise tolerance and your psychological and social well-being without increasing risk.

- **3D heart mapping:** If you have arrhythmias, you could be helped through the creation of a 3D model of your heart to pinpoint abnormal electrical impulses. Once identified, this abnormal tissue can be destroyed through radiofrequency ablation.
- **Heart failure monitoring implant:** A new FDA-approved implant monitors heart failure, significantly reducing heart failure hospitalizations and improving your quality of life.
- **Coronary imaging system:** A near-infrared light delivered through a catheter identifies hard-to-find artery blockages that can't be detected by such common tests as treadmill exams and coronary angiograms. The system is available at HonorHealth Scottsdale Shea Medical Center.
- **Reduced radiation:** A 3D visualization system reduces radiation if you're having a pacemaker or defibrillator implanted or if you're being tested for atrial fibrillation. Available at HonorHealth John C. Lincoln Medical Center, the technology also is used for interventional cath lab procedures.

## Accreditations

Accreditations show you our commitment to provide excellent patient care as measured by an outside agency. All five HonorHealth medical centers are accredited Chest Pain Centers with PCI (percutaneous coronary intervention, also known as angioplasty) by the Society of Cardiovascular Patient Care.

### Deer Valley Medical Center\*
